GOLDEN GATE STRAWBERRY

## Golden Gate Strawberry

*May be a golden opportunity for you.*

---

This new seedling is a strong grower, making lots of plants, with large luxuriant foliage; many single leaves measuring over nine inches across. It has a strong staminate blossom with lots of pollen. It is a good polenizer for any imperfect blossom as it blossoms early and late. It produces strictly fancy, firm fruit, clear to the end of the season, of a rich crimson color, with no green tips.

The judges pronounced the quality as one of the best.

This is a new seedling of mine that was awarded 1st Premium by the Massachusetts Horticultural Society in 1904, in a strong competition, and was highly praised by those who saw it.

In June, 1906, it won \$23.00 in prizes on 7 quarts at the Massachusetts Horticultural Exhibition, and in less than five minutes after the premium cards had been placed on the baskets I booked orders for \$75.00 worth of the plants. It is one of the best, if not *the* best, strawberries ever put on the market. You who have not succeeded in growing a good crop of Marshalls I think will find a good substitute in the "Golden Gate."

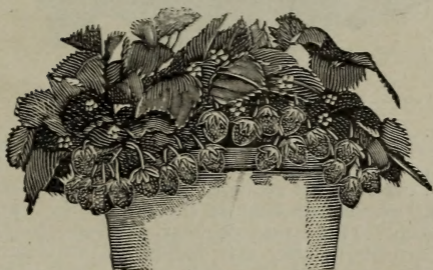

The "Golden Gate" will succeed where the Marshall fails. I can grow 20 quarts of "Golden Gate" where I can grow 1 quart of the Marshall. Seven berries have filled a quart. It is extra quality and sells at the highest price.

As an extra fancy strawberry it will take the place of the Marshall, for in most places the Marshall is a very poor bearer. I have grown the Marshall 14 years and have had only one paying crop. The Marshall blossom is very tender and usually gets killed by frost. The year I

had a crop of Marshalls there was no frost to kill the blossoms.

In 1906 the Marshalls and "Golden Gates" grew within 7 feet of each other, the blossoms on the Marshalls were nearly all killed but the "Golden Gates" were killed but little. You will make no mistake in setting this variety. Price: 6 plants, \$1.25; 12—\$2.50; 100—\$10.00.

Fall Bearing

Strawberries

**Pan-American ( Perfect Blossom )**

A strawberry plant that produces a continuous crop of nice berries the same year the plants are set. Both parent plant and runner plants bear fruit from June till November in the open field without protection, except from their own foliage. New blossoms coming continuously. The berries are good size and nice quality. They require rich, moist land to do their best, but will grow where any variety will. To do their best, in the fall the first blossom stems should be cut off. I sold one man 50 plants in May, he wrote me in November (same year), he had picked 75 quarts from them.

Try a few, you will be pleased with them. In September and October I picked 300 pints on a very small bed. Price: 6—\$1.25; 12—\$2.50; 100—\$15.00.

## The Autumn

It has a pistilate blossom and must be set near the Pan-American to bear fruit in the fall. It makes lots of plants on moist land, but all of them are not as sure to fruit in the fall as the Pan-American. Those that do bear, produce abundantly a medium size, very handsome, very dark colored, perfect shaped, nearly round berry. This is one of the most productive spring bearing varieties one can grow, but if allowed to fruit early it will not do as well in the fall. The plants one wishes to fruit in the fall may not be allowed to bear in the spring by cutting the early fruiting stems. Price: 6 plants, \$1.00; 12—\$2.00; 100—\$10.00.

---

## The Abington (New).

The following is the originator's description:

I claim that the "Abington" is the best yielder and makes the largest matted row, perfect blossom berry, that has been introduced up to date.

The "Abington" is a berry that will take the place of the Bubach, it is a better plant maker, the blossom is perfect and hardy, it sends up

more fruit stalks, there are more buds on each fruit stalk, it ripens at the same time, the berry is better color, firmer, better flavor, runs larger throughout the season, and holds its color better after it is picked.

Strawberry growers who are looking for a great market berry that is a big cropper, big plant maker and a big money maker—try the “Abington.”

I saw the originator's bed of “Abingtons” in 1905 and I should say they are all he claims for them. S. H. W.

Price: 12—50c., 100—\$1.00, 1,000—\$5.50.

## Great Scott

One of the largest even to the last picking. The plant is very strong and healthy. Berries bright scarlet color. Its season is medium to late. It is very productive. Price: \$1.00 per doz.; \$4.00 per 100.

## Common Varieties

	Per Dozen	Per Hundred	Per Thousand
*Per. <i>Marshall</i> , Large, Crimson, mid-season, extra quality, wants extra culture,	\$0.25	\$1.00	\$4.00
*Per. <i>Miller</i> , Large, Scarlet, mid-season, extra quality, very productive,	.35	1.00	5.00
*Imp. <i>Bubach</i> , Large, Scarlet, mid-season, good quality, productive,	.25	.75	5.00

*Per. <i>Senator Dunlap</i> , Crimson, Medium size, mid-season, extra quality, very productive. It will please you,	.25	.75	4.00
*Imp. <i>Minute Man</i> , Crimson, medium to large, mid-season, good, very productive,	.25	.75	4.00
*Imp. <i>Sample</i> , Quite Large, Scarlet, late, good, a money maker, productive,	.25	.75	4.00
*Per. <i>Brandywine</i> , Large, Crimson, late, extra quality, productive,			
*Per. <i>Gaudy</i> , Crimson, large, very late,			
*Per. <i>Gladstone</i> , Large, Scarlet, mid-season, good, productive.			
*Per. <i>Glen Mary</i> , Large, Crimson, medium, good, productive,			
*Per. <i>Clyde</i> , Large, Scarlet, early, very productive, good,			
*Imp. <i>Haverland</i> , medium to large, Scarlet, early to mid-season, good, very productive,			

\*Per. *Excelsior*, the earliest.  
small, Crimson, acid,

\*Per. *Belmont*, large, Crim-  
son, late, good,

"*Golden Gates*," look at the  
description on another  
page.

---

\*Per. means perfect blossom.

\*Imp. means imperfect blossom.

---

Try a few of the "Golden Gates." You will be  
pleased with them. They do well on all kinds of  
soil.

---

## Pot-Grown Strawberry Plants

For late Summer or early Fall setting, pot-  
grown strawberry plants will give the best fruit  
the following spring, if they are well cared for.  
They are sure to live in dry or wet weather, as  
there is a ball of earth on every plant which is  
well filled with roots.

Before planting, make the ground rich with  
stable manure or fine bone and ashes.

For a small bed, set plants in three rows, one  
foot each way; then leave a path thirty inches  
wide and set three more rows. Keep all runners  
cut off.

I can furnish the following varieties of Pot Grown Strawberry Plants in August and September :

**Marshall, Excelsior, Sample, Sen. Dunlap, Haverland, Minute Man, Brandywine and Ridgeway, 12 50c; 100 \$2.50.**

**Great Scott and Abington, 12 \$1.00; 100 \$3.00.**

**Golden Gate, 12 \$2.50; 100 \$10.00.**

**Pan-American, 12 \$2.50; 100 \$15.00.**

**Autumns, 12 \$2.00; 100 \$10.00.**

I sold the Pan-American Strawberries in Boston in September and October 1905 at wholesale, for 40c per pint and they retailed at 60c per pint.
